File Upload Box

If you want to allow a user to upload a file to your web site, you will need to use a file upload box, also known as a file select box. This is also created using the `<input>` element but type attribute is set to file.

Attributes:

name: Used to give a name to the control which is sent to the server to be recognized and get the value.

accept: Specifies the types of files that the server accepts.

Code:

```
<html>

<head>
    <title>File Upload Box</title>
</head>
<body>
    <form>
        <input type = "file" name = "fileupload" accept = "image/*" />
    </form>
</body>
</html>
```

Output:

Button Controls

There are various ways in HTML to create clickable buttons. You can also create a clickable button using `<input>` tag by setting its type attribute to button. The type attribute can take the following values

submit

This creates a button that automatically submits a form.

reset

This creates a button that automatically resets form controls to their initial values.

button

This creates a button that is used to trigger a client-side script when the user clicks that button.

image

This creates a clickable button but we can use an image as background of the button.

Code:

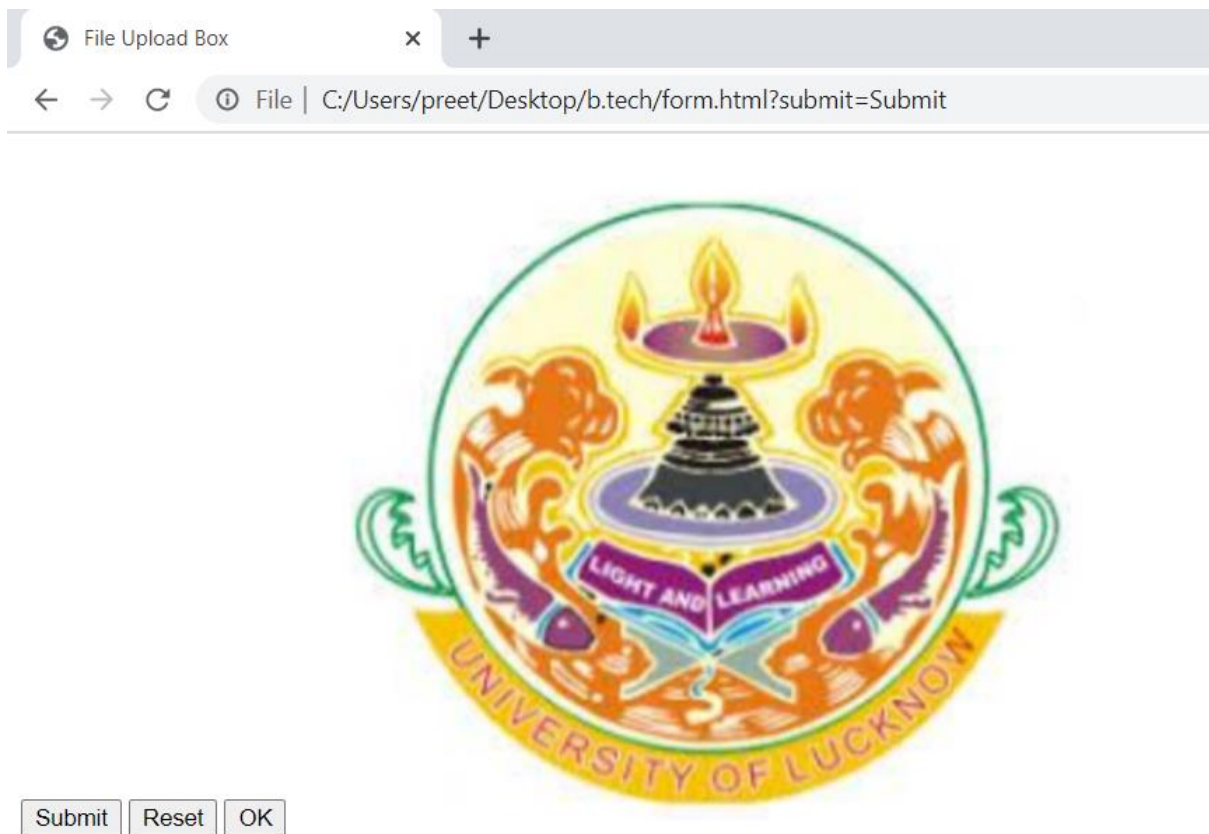

```
<html>

<head>
  <title>File Upload Box</title>
</head>

<body>
  <form>
    <input type = "submit" name = "submit" value = "Submit" />
    <input type = "reset" name = "reset" value = "Reset" />
    <input type = "button" name = "ok" value = "OK" />
    <input type = "image" name = "imagebutton" src =
"C:\Users\preet\Desktop\b.tech\lu.png" />
  </form>
</body>

</html>
```
