

HTML iframe

An iframe in HTML is used to display a web page inside a web page. An inline frame is specified by the HTML <iframe> tag.

For embedding another document within the current HTML document, an inline frame is used.

Syntax: <iframe src="url" title="description"></iframe>

Code:

```
<html>

<head>

    <title>HTML iFrames</title>

</head>

<body>

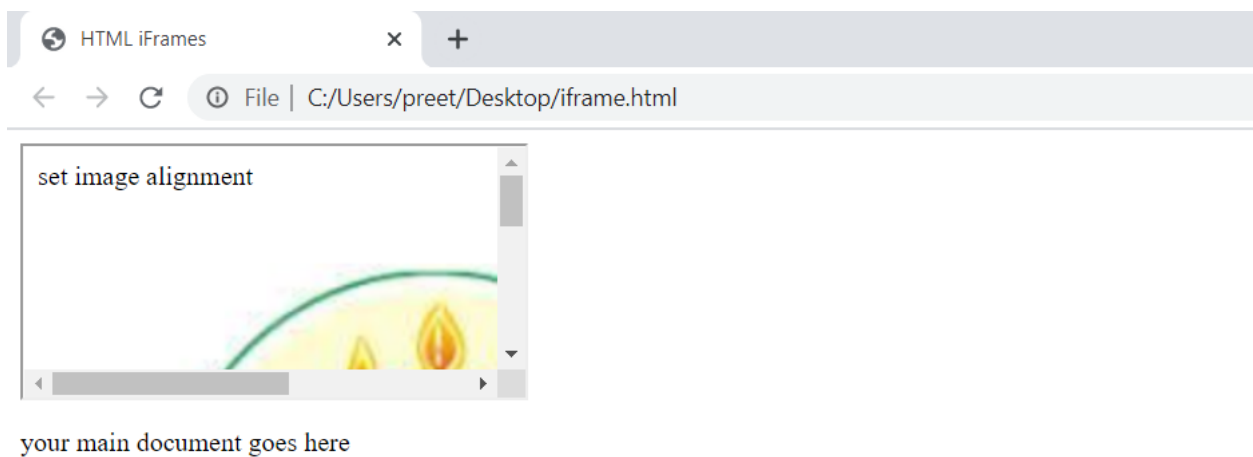

<iframe src="C:\Users\preet\Desktop\html2.html" title="description" >
your browser does not support iframe
</iframe>

<p>your main document goes here</p>

</body>

</html>
```

Output:

Iframe - Set Height and Width

To define the size of the iframe, use height and width attributes.

By default, the height and width are given in pixels

Syntax: <iframe src="url" title="description" width="200" height="300"></iframe>

name

This attribute makes it possible for you to assign a frame a name. It is used to denote the frame into which a document should be placed. This is particularly important if you want to build links in one frame that load pages into another frame, in which case a name is needed for the second frame to define itself as the link target.

Syntax: <iframe src="url" title="description" name="iframe" width="200" height="300"></iframe>

marginwidth

This attribute allows you to define the width of the space between the borders on the left and right of the frame and the content of the frame. In pixels, the value is given. for example marginwidth = "10".

Syntax: <iframe src="url" title="description" name="iframe" width="200" height="300" marginwidth="10" ></iframe>

marginheight

This attribute allows you to determine the height of the space between the border of the frame and its contents at the top and bottom. In pixels, the value is given. , for example marginheight = "10".

Syntax: <iframe src="url" title="description" name="iframe" width="200" height="300" marginheight="10" ></iframe>

scrolling

This attribute controls the appearance of the scrollbars that appear on the frame. This takes values either "yes", "no" or "auto". For example scrolling = "no" means it should not have scroll bars.

Syntax: <iframe src="url" title="description" name="iframe" width="200" height="300" marginheight="10" scrolling="no" ></iframe>
